

## **UVision further expands its US operations with the establishment of a production and training facility in Stafford County, Virginia**

*The new investment signifies the company's increased commitment to the United States market and will enable it to meet the growing demand for loitering munitions on an international level*

**Washington DC, USA December 15<sup>th</sup>, 2021**— UVision Air Ltd., a global leader in aerial loitering munition systems, continues to expand its operations in the US by establishing a production and training facility in Stafford County, Virginia. The company will lease 25,000 square feet of space at the Quantico Corporate Center, where it will fulfill contracts awarded by the US Government and international customers for the manufacture and assembly of loitering munitions. Production of the HERO series of Loitering Munitions will begin at the new production facility in mid-2022.

UVision USA Corporation, a wholly-owned subsidiary of UVision Air Ltd., is playing an integral role in UVision's ongoing global expansion of operations. By increasing its local production capability within the United States, UVision USA will be able to further improve its high-level, rapid response to US customers and increase supply to international customers – either directly or through government-to-government initiatives – while creating dozens of local job opportunities.

“We are very excited that our new Production and Training Center will be located in the Commonwealth of Virginia,” says Jim Truxel, Chief Executive Officer of UVision USA Corporation. “It is another step in the expansion of UVision USA support and deepening of the commitment to our customers in the US. Situated within a short commuter drive from Richmond, Fredericksburg, Manassas and Arlington, Stafford County gives us access to a large pool of quality talent, aligning with our strategic growth goals. UVision USA will be active in the local community, and we plan to network with the Commonwealth's academic institutions and local businesses that can supply services and materials for the production of the HERO family of loitering munitions.”

### **About the HERO series**

The HERO series of loitering munitions consists of eight loitering munition systems, designed for different missions at various ranges, using various types of payloads. The HERO systems are the fastest sensor-to-shooter loitering munitions, enabling front-line forces to independently locate, track and attack time-sensitive targets, with pinpoint precision. Each munition can handle different missions, ranging from lightweight static or moving targets, such as light-duty vehicles and human targets, to larger fortified or heavily-armored targets, such as MBT (Main Battle Tank), enemy air defenses and other strategic objectives. The HERO series' unique design enables the munitions to carry out precision strikes in urban areas or remote locations, with

minimal collateral damage. In cases where an attack is aborted, the systems can be recalled and another target selected, or retrieved via an on-board recovery system for a future mission. With extremely low noise and thermal signature, these systems are integrated with highly-advanced, stabilized electro-optic day/night cameras, and are ideal for deployment from air, land and naval platforms.

### **About UVision Air Ltd.**

UVision designs and manufactures combat-proven smart loitering munition systems, providing military organizations around the globe with precise and effective operational attack capabilities. Its innovative, cost-effective systems are based on cutting-edge technology and 30 years of extensive field experience by military professionals, engineers, and the company's own management team.

In early 2019, UVision Air Ltd. established UVision USA Corporation, which will produce the HERO series of loitering munitions in the United States, beginning in mid-2022. The establishment of UVision USA further strengthens UVision's overall commitment to the US Armed Services and the US economy.

The HERO series of systems provides high-precision strike capabilities, based on unique aerodynamic platform configurations. UVision's loitering munitions are designed with unique flight qualities for precision-attack munitions, integrating advanced airborne guidance and sophisticated navigation algorithms, integrated with C4I stations – thereby meeting the requirements of today's modern battlefield challenges for combat in complex and dynamic environments.

The HERO series of loitering munitions are suitable for tactical and strategic targets – whether for short, medium or long range – utilizing a variety of warheads to ensure maximum mission effectiveness. The units are operationally deployed and field proven. ISO certified, UVision is fully committed to providing turnkey solutions to its extensive network of partners and customers around the world, with high-quality service and swift support.
